Sales Partner Guide

Ops for Shops

Your data should work for you. Let's make it.

Braedon Long · b@opsforshops.com · opsforshops.com

What We Do (30-Second Version)

Small businesses run on 5–10 software tools that don't talk to each other. Their numbers don't match across systems, they're entering the same data twice, and they're overpaying vendors for features they don't use. I fix that.

> **I'm a CTO in a box.** Enterprise architecture background, aimed at protecting independent businesses. I work with whatever they already have — or want to have. No pushing platforms, no vendor loyalties. Just making their operations actually work.

The Three Services

1. Vendor Alignment

Their POS, CRM, accounting, scheduling — none of it syncs. I review what they're paying for, cut what's dead weight, and make the rest line up.

- POS, CRM, and accounting that actually sync
- Find critical services they're overpaying for
- Get the most out of what they already have

2. Data Cleanup & Migration

Their reports don't match reality. Inventory says one thing, books say another. Or they're stuck on an old platform and terrified of switching. I find where the numbers go wrong, fix the source, and handle migrations without losing what matters.

- Books that match across every platform
- Safe data migrations between systems — no data loss
- Numbers they can actually trust when it counts

3. Automation

If they're entering the same data twice, something's broken. I build workflows that handle the repetitive stuff — invoices, follow-ups, data entry — so they get hours back in their week.

- Invoices, follow-ups, and data entry on autopilot
- Tools that update each other without a human in the middle
- Time back for the work that actually makes them money

The Door-Opener: Small Business Tune-Up

> **This is where every conversation should aim.**

Detail	Info
Price	$500
Format	90-minute live working session
Deliverable	Report in 48 hours — specific fixes with effort, cost, and impact
The hook	The $500 credits toward any project that follows

It's a no-lose for the prospect. They get a clear picture of what's broken and a plan to fix it — even if they never hire us for the project.

> **The line:** "For $500 you get a 90-minute session with an enterprise architect who's going to find where your software is costing you time and money. You get a report in 48 hours with exactly what to fix and what it costs. And if we work together, the $500 comes off your first project."

Who To Target

Best Prospects

1. **Office managers / practice admins** — law firms, accounting practices, medical offices, real estate. They're holding everything together with duct tape and drowning in admin busywork. They can justify the spend as an operational expense.
2. **Owners who accidentally became their own IT department** — solo practitioners, small firms (1–15 people). Started the business to do the work, now they spend half their time wrestling software. They have decision authority.
3. **Anyone mid-vendor-migration** — handed a platform migration and hit a wall. Budget is already approved — they just need someone who can actually do it.

The universal tell: Anyone who says "I should really get my systems sorted out but I don't have time" or "my numbers never match."

Best verticals: Trades (HVAC, plumbing, electrical), professional services (law, accounting, medical), retail shops, restaurants, agencies. Anyone running 3+ software tools that don't sync.

Conversation Starters by Vertical

- **Trades:** "Does your dispatch software talk to your books? Or is someone entering jobs in two places?"
- **Professional services:** "How long does it take your office manager to close out the month? If it's more than a day, something's broken."
- **Retail / restaurants:** "When your POS says one thing and your inventory says another, who figures out which one's right?"
- **Agencies:** "How many hours a week does your team spend on reporting that could be automatic?"

Pricing & Your Commission

Two tiers based on how you refer

Warm lead (15%) — You send me a name, I do the selling. Text or email intro, I take it from there.

Direct booking (25%) — You sell the Tune-Up yourself and book them in through your partner link. Prospect shows up ready to go.

Engagement	Typical Range	Warm Lead (15%)	Direct Booking (25%)
Small Business Tune-Up	$500	$75	$125

Vendor Alignment project	$2,000 – $5,000	$300 – $750	$500 – $1,250
Data Cleanup / Migration	$2,000 – $10,000	$300 – $1,500	$500 – $2,500
Automation build	$2,000 – $8,000	$300 – $1,200	$500 – $2,000

All project pricing is scoped upfront in the Tune-Up deliverable. No surprises for the client, no surprises for you.

Ongoing Management — 10% to you (recurring)

Some clients hand off ongoing management after the project — retainer for keeping integrations running, vendor relationships managed, and automations updated. This is passive income for you: the referral keeps paying as long as the client stays.

Retainer	Typical Monthly	Your Cut (monthly)
Light (monitoring + vendor mgmt)	$300 – $500/mo	$30 – $50/mo
Full (optimization + automation)	$500 – $2,000/mo	$50 – $200/mo

> **Example:** You book a plumbing company directly for a Tune-Up ($500 → $125 to you), then they do a vendor alignment + automation project ($6,000 → $1,500 to you), then go on monthly retainer ($500/mo → $50/mo to you, ongoing). That one conversation is worth **$1,625 upfront + $600/yr recurring.**

Typical Client Journey

Most clients follow the same path. One referral turns into three paydays.

1. Tune-Up

They pay $500, we sit down for 90 minutes, they get a report with specific fixes. This is where trust gets built. Most people have never had someone look at their whole stack at once.

2. Project

The report surfaces 2–3 things that are costing them real time or money. They pick one — usually vendor alignment or a migration they've been putting off. Typical project runs 2–6 weeks, $2,000–$10,000.

3. Retainer

After the project, they realize they don't want to manage this stuff themselves. They stay on for monthly ops management — keeping integrations healthy, handling vendor changes, updating automations when the business shifts.

Not every client goes all three steps. Some stop after the Tune-Up with a report they can act on themselves. That's fine — they still refer others. But the ones who go the distance are where the real value compounds, for them and for you.

Objection Handling

"I already have an IT guy."

> IT guys keep servers running and fix printers. I make your business software work together. Different job entirely. Most of my clients have IT support already.

"We looked at [Square / Toast / Jobber / HouseCallPro] and they do everything."

> All-in-one platforms overpromise. They lock you into their ecosystem, long contracts, and make it painful to leave. I work with what fits YOUR business — not what fits one vendor's revenue model. And if that all-in-one is actually the right call, I'll tell you that too.

"I don't have the budget right now."

> The Tune-Up is $500 and it credits toward future work. Most clients find it pays for itself in the first week — overpaid vendors, duplicate subscriptions, wasted hours. The report alone is worth it even if you never hire us.

"How is this different from a consultant?"

> Most consultants give you a PowerPoint and leave. I do the work. I build it, I own it, I make sure it actually runs. And everything I build, you own — no lock-in to me either.

"Can you work with [specific software]?"

Yes. I work with whatever you have. POS systems, CRMs, QuickBooks, Xero, scheduling tools, inventory — doesn't matter. That's the point. I'm not selling you a platform. I'm making your existing tools work.

How To Refer

1. **Warm intro is best.** Text or email connecting the prospect to Braedon directly. "Hey, this is the guy I was telling you about."
2. **Or book them straight in.** Send them to **opsforshops.com** — there's a booking link for a free 30-minute call. No pitch, no commitment. Just a conversation about what's going on.
3. **Let me know first** so I have context before they reach out. A quick text with the business name, what they do, and what pain you heard.

Tracking & Payment

Every referral is tracked by your name from first contact. You get paid when I get paid — no waiting on net-30 cycles that aren't mine. You'll get a monthly summary of your active referrals and commissions.

The Philosophy

The middle class doesn't exist without small business. Corporate systems taught me how to make tools line up, data stay honest, and hours come back. Now that efficiency is aimed at protecting independent businesses — not squeezing them.

> **Your data should work for you. Never send a human to do a computer's job.**
